Can you edit a gif in paint

Skip to content So i've edited my avatar, but after i save it, it comes out as just a plain gif as opposed to the animated one, so how could i edit it and keep the animation? -----> You need to edit each frame of the .gif individually. If you're doing that, uh, elaborate moar? :3 well i'm just opening up the .gif in paint.net and editing it, then saving it, and then it comes out as a regular image (as you can see in the OP) I don't think Paint.NET supports animating GIFs. If you open it in GIF or Photoshop, it'll show multiple layers, and you have to edit each one, as each one is a frame. alright, i'll try it in gimp then In GIMP each frame is a layer, and when you save as GIF make sure to tell it animated, not flat. In Photoshop, save for web and devices because i'm a noob at photo editing, but thanks anyway for doing it (and i like the file name) and thanks chaos for the plugin 1 Open a file that you want to make into a GIF in Paint 3D. You can do this by navigating to your file in File Explorer, right-clicking it, then selecting Open With > Paint 3D. Or you can launch Paint 3D, then go to Menu > Open > Select your file. Paint 3D is just Paint with an upgrade and it can do the same things that old Paint used to do. You can create and edit 2D images or 3D images. If you don't have an image already that you'd like to turn into a GIF, you can start from scratch. 2 Edit the image. If, for example, you selected a picture for a background, you can insert words or draw on it. Make sure you utilize all the tools appropriate for your images, like shapes, text, brushes, or stickers. Advertisement 3 Click Menu. The menu option is next to an icon of a folder in the top left corner of your workspace. 4 Click Save as and Video. You'll see Save as in the panel on the left side of the page. Video will appear on the right under the "Save as copy" header. 5 Click the Save as type drop-down menu and select "GIF (video)." Once you make this selection, you should see the options change below it. 6 Adjust the quality, size, and animation of your GIF. You'll see these things listed under "Preview," and can make these changes to affect how your GIF will appear. As well as using the options in the panel on the right, click Adjust angle & framing from the panel above your preview for more options. 7 Click Save. It's in the lower right corner of your screen and will save your GIF. If you are creating a text GIF instead and want the background to be transparent, go to Canvas and toggle the switch off next to "Show canvas." Since you can only make simple GIFs with Paint, you'll want to use a website or program like Photoshop, Carpstudio, or GIMP. Those other programs will help you create GIFs with moving frames. Advertisement Add New Question Question Can I animate the image without using any additional programs? If you have already created the frames, you can use a website to create the GIF. Question Can I use paint on my touch screen? Yes, you will be able to use this program on your touch screen. Question How do I add text to a GIF image? If you are having trouble finding the tool used for creating a text box look for the "a" above the magnification tool. Then drag out the text box, select font and color, and type your message. However, using default font and size, it uses about 3 colors. Ask a Question Advertisement 1 Written by: wikiHow Technology Writer This article was written by Darlene Antonelli, MA.
